

Abstract of the Disclosure

The invention relates to a lift cage, a lift with the lift cage and a method of assembling the lift. The lift cage comprises a three-dimensional body for receiving
5 persons or articles to be conveyed and has a support body for accepting all forces acting on the three-dimensional body during the conveying of the persons or articles. The three-dimensional body is suspended in the support body. The support body comprises two side frames which are connected together by way of at least one top frame in moment-stiff manner.
